

Develop and sales of water & air analyzer

• COD, Total phosphorus& nitrogen, Total Cyanogen automatic Analyzer

Features

- Including an automatic analyzer of the environmental water, I answer the needs of the visitor in the wide product line such as all cyanogens analyzer or phenol automatic analyzer corresponding to the measurement of the cyan t hat it is hard to measure
- As for the gas measurement to occur by a production process including chimney flue emission measurement based on the Air Pollution Control Act in the field of atmosphere, I produce the gas monitor corresponding to wide customer needs.

Overview (Technical principles, actions, etc.)

Total Cyanogens automatic analyzer TCN-508

The measurement of the cyan was performed by distillation operation - pyridine pyrazolone absorptiometry determined by JIS K0102, but this method for measurement needed mastery of skills, and the method that I could measure that it was easy to suffer for several hours for measurement time, and was certain was expected.

Total Cyanogens automatic analyzer TCN-508 adopts a minus number pressure ventilation distillation - cyan ion electrode assay in total cyan automatic analyzer and are a device corresponding to this needs.

Total cyanogens automatic analyzer TCN-508 can measure all cyan in a sample within 30 minutes and the measurement from 0.01 mg/L is possible and it is wide in the labor saving measurement for not only the automatic monitoring of all cyan but also the hand analysis and can use the measured concentration.

Introductory Track Record

- In Japan, a device of co, producing it is used much Jana as factory wastes management of each place of the whole country including a river, the top and bottom water department. ODA export was the center until about 1990, However exports many devices to Korea up to the present since the introduction of our analyzer was started in Korea from 1985.

In addition, by the increase in domestic manufacturer-like overseas advance, demand in Asian each place increases, and export to Taiwan, Thailand, Vietnam increases these days.

In China, I establish the sale subsidiary in Beijing in 2012 and go the development to the China market positively.

Effects

- The wastewater management that reached in hand analysis conventionally automatically perform it, and the numerical value that is equal to hand analysis is provided.
- The data acquisition in the distant place is possible to be able to perform digital communication in a device in the rivers.
- In the factory, I help labor saving and environmental conservation measures to be able to automatically do drainage monitoring for 24 hours.
- Anatec Yanaco is also producing gas analyzer.
