Overview (Technical principles, actions, etc.)

Water treatment plant is most important not only for the plant owners but for overall community. Operation and maintenance of such plant involve various type of works. However, in many cases there are no horizontal ties to each other. This cause trouble to plant owner and sometimes delay in response, which may lead to bigger trouble.

HIYOSHI corporation provide all kinds of work being required for appropriate maintenance and operation of water treatment plants at “ONE-STOP” for avoiding, early resolution, and prevention of any trouble.

● MEASUREMENT (Analysis)

Appropriate water treatment is fundamental. Abnormal water quality may lead to big issue. To avoid such trouble, periodical water testing by reliable testing laboratory is important.

● MANAGEMENT (Facility operation, maintenance, and chemical supply)

Regular facility operation and maintenance is the most important for appropriate water treatment. Various qualified and experienced experts support plant operation at 24h-7d. We repair devices if found necessary from daily maintenance. We also give plant renovation for renewal or expansion of facility.

Chemicals are also playing important role in water treatment. Our experts select and provide necessary chemicals for water treatment.

● CONSERVATION (Environmental conservation)

We provide regular cleaning of plant and treatment of waste generated from the plant as well.

Introductory Track Record

We have experience in various kinds of water treatment facilities from governmental to private: drinking water treatment plant, sewage treatment plant, waste treatment plant, industrial waste water treatment plant, domestic water treatment system (Jokasou).

[Example for drinking water total-support]
